Literature: Mardia, Kent and Bibby: Multivariate Analysis, Academic Press 1979, 7th reprint 2000.

Examination: Hand-in exercises (HE). These are given on each lecture (as a selection from the book), and they are supposed to be handed in the next lecture and corrected to the next lecture after that. There will also be discussion exercises (DE), which are not part of the examination, but which we will discuss on the next lecture. Everybody should be prepared to present a solution to these on the board.

On the last lecture, each participant is supposed to present a part of some of the remaining chapters (see below).

Lectures: The lectures are given 10.15-14 including lunch break (10-12 the first time), at Ekonomikum, Kyrkogårdsgatan 10. Here is a schedule of dates, rooms, topics and lecturers:
